

# Exporter Add-on (For WPL)

**Realtyna Inc.**

*Contents of this Manual are applicable to the WPL Complex Add-On. Details of this Manual may be different based on the customizations you have or your software.*

# Introduction

This manual contains information about the Exporter Add-on, an extension for WPL plugin.

The Exporter Add-on is a powerful extension that enables real estate WordPress websites to export properties, users etc. into CSV or XML file from their websites.

## System Requirements

To use the Exporter Add-On, you will need the WPL Pro. (Don't install any Add-On in WPL basic)

## Installation

If you have the installation package of the Exporter Add-on, you can easily upload it from the following path: WordPress->WPL dashboard->Install Addon form.

## Running Exporter Add-On

To export data from WPL tables, Please go to the WPL-> Exporter Add-on page.

The screenshot shows the 'Exporter Addon' interface. At the top, there is a title 'Exporter Addon'. Below it, there are two dropdown menus: 'Export Table' and 'Export Format'. Underneath these is a section titled 'Additional Filter' which contains a text input field labeled 'WHERE Condition:'. At the bottom of the interface is a blue button labeled 'Export'.

- Export Table: Select the source table you want to export.
- Export Format: Select file format to export data.
- Additional Filter (Where Condition): This field is given for developer purposes (to put any additional WHERE condition to filter table data).

## Export

In order to export the WPL data, select the WPL table you want to export. Select the format to export the data (CSV or XML). There is one more additional filter field for developers to add extra WHERE condition to filter table data before export.

There is also a Property Filter section with some basic property fields to filter the property table data. For example if you want to export only confirmed properties, then you can select the Confirm Status filter.

The screenshot displays the 'Exporter Addon' interface. At the top, there are two dropdown menus: 'Table to Export' (set to 'wpl\_properties') and 'Export Type' (set to 'csv'). Below these is the 'Property Filter' section, which includes dropdowns for 'Listing', 'Property Type', 'User', 'Confirm Status', and 'Finalize Status', along with text input fields for 'Listing ID', 'Location', and 'Text Search'. The 'Additional Filter' section contains a 'WHERE Condition:' text area and a 'Click for Export' button. At the bottom, there is a blue 'Export' button and the text '28 records found.' Red arrows point from yellow callout boxes to the 'Table to Export', 'Export Type', 'Optional Filters for Properties', and 'Click for Export' elements.

After selecting the required inputs, click on the “Export” button. This will manually export the table data in the selected file format and a file download dialog will open, allowing you to download the exported file. It may take several minutes based on your server load and the number of records in the selected table.

## XML Feeds

Exporter addon can generate formatted XML feed of listings for **Zillow**, **Trulia** and **WPL**.
