

Tags Add-on (For WPL)

Realtyna Inc.

Contents of this Manual are applicable to the WPL Tags Add-On. Details of this Manual may be different based on the customizations you have or your software.

Introduction

This Manual contains information about the Tags Add-On, an extension for the WPL plugin.

The Tags Add-On is a powerful extension that enables real estate WordPress websites to add new tags for their listings and categorize their listings based on those tags.

System Requirements

To use the Tags Add-on you will need the following:

1. WPL PRO. (Do not install any add-on on WPL basic)

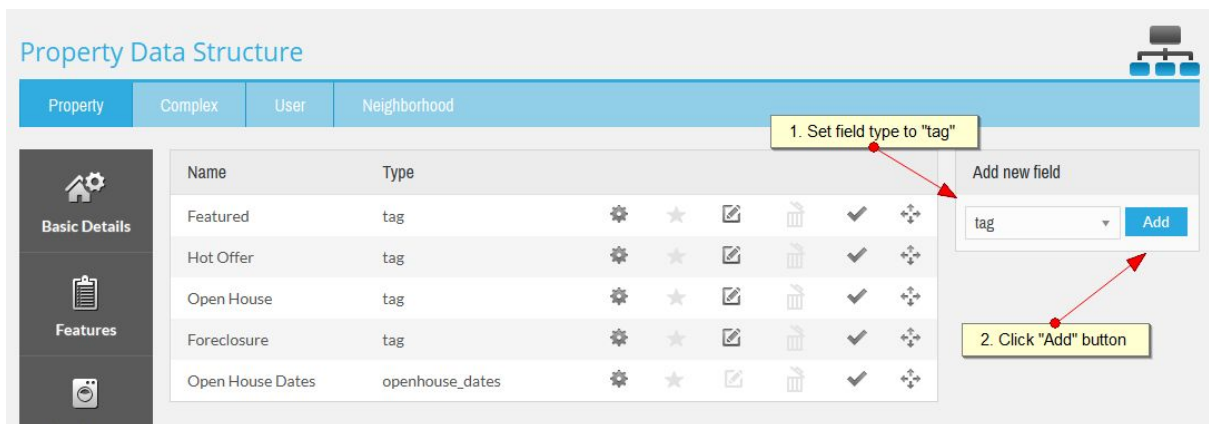

Installation

If you have the Installation Package of the Tags Add-On, you can upload it from the following path: WordPress->WPL dashboard->Install Addon form.

Configuring Tags Add-On

Add new tag

You can add new tags using the "Add new field" form in the WPL->Flex menu. Please select "tag" as the field type and then click on the "Add" button.

After clicking on the "Add" button you should see the below form. Using this form you can configure your new tag field.

General Options

Data category: Basic Details

Name:

Text Search: Yes

Detail Page: Show

Search Widget: Show

Specific Options

Specificable: No

Params

Ribbon: Show

Tags Widget: Show

Background Color: 29a9df

Text Color: ffffff

Labeled by default: No

Accesses

Viewable by: All Users

1. **Name:** Name of tag.
2. **Ribbon:** Whether the tag should be shown on the listing image on the listings page or not.
3. **Tags Widget:** Whether the tag should be shown on the WPL Tags widget or not.
4. **Background Color:** Background color of the tag ribbon or tag on the WPL Tags widget.
5. **Text Color:** Text color of the tag.
6. **Labeled by default:** You can set the default when you're adding a new tag. Using this option you can specify whether all properties should be labeled by default or not.

Note: You should specify a dark text color for light background colors and vice versa.

Note: If you want to create a hidden tag, you should set both the "Ribbon" and the "Tags Widget" to hide.

Manage existing tags

WPL has 4 tags by default: "Featured", "Hot Offer", "Open House" and "Foreclosure". You can edit these tags by clicking on the edit icon on them in WPL->Flex menu.

Create a menu for showing listings of a specific tag

You can create a property listings page to show all the listings of a certain tag. To do this, navigate to Pages->Add new and click on WPL shortcode wizard icon ([W] icon in the editor).

A screenshot of a filter menu with a close button (X) in the top right corner. The menu contains the following items:

- Price Unit: \$
- Featured: Any
- Hot Offer: Any
- Open House: Any
- Foreclosure: Any
- Sold: Any
- User: ----
- Target page: ----
- Page Size: 12

In the below example, we created a menu for showing FSBO listings using a custom tag named FSBO.

Three real estate listings are displayed in a carousel format. Each listing includes a photo, a title, a location, and a price. The first listing is a 'Villa For Sale' in Perry County, Arkansas, United States, priced at €127,251. The second is an 'Office For Sale' in Madera City, Madera County, California, priced at €311,197. The third is an 'Office For Sale' in Inyo City, Inyo County, California, priced at €294,887. Each listing also features a 'Featured' tag and an 'FSBO' tag. Below each listing, there are icons representing the number of bedrooms, bathrooms, and photos.

Use tags for filtering listings on the Carousel widget

You can filter carousel listings based on certain tags as well. If you want to list selected listings on the carousel, you can simply create a "Carousel" tag and add this tag to your desired listings and then use the "Carousel" tag in the carousel widget to list your selected listings.

Only Featured

Only Hot Offer

Only Open House

Only Foreclosure

Only Sold

Similar Properties

Only Similar

Tags widget

You can use the WPL tags widget to list all of the tags with their count. You can show/hide tags on the tags widget using the "Tags Widget" option in the Flex menu.

(WPL) Tags: Listing Tags

Title

Layout

Target page

Kind

CSS Class

Show Count

[Delete](#) | [Close](#) [Save](#)

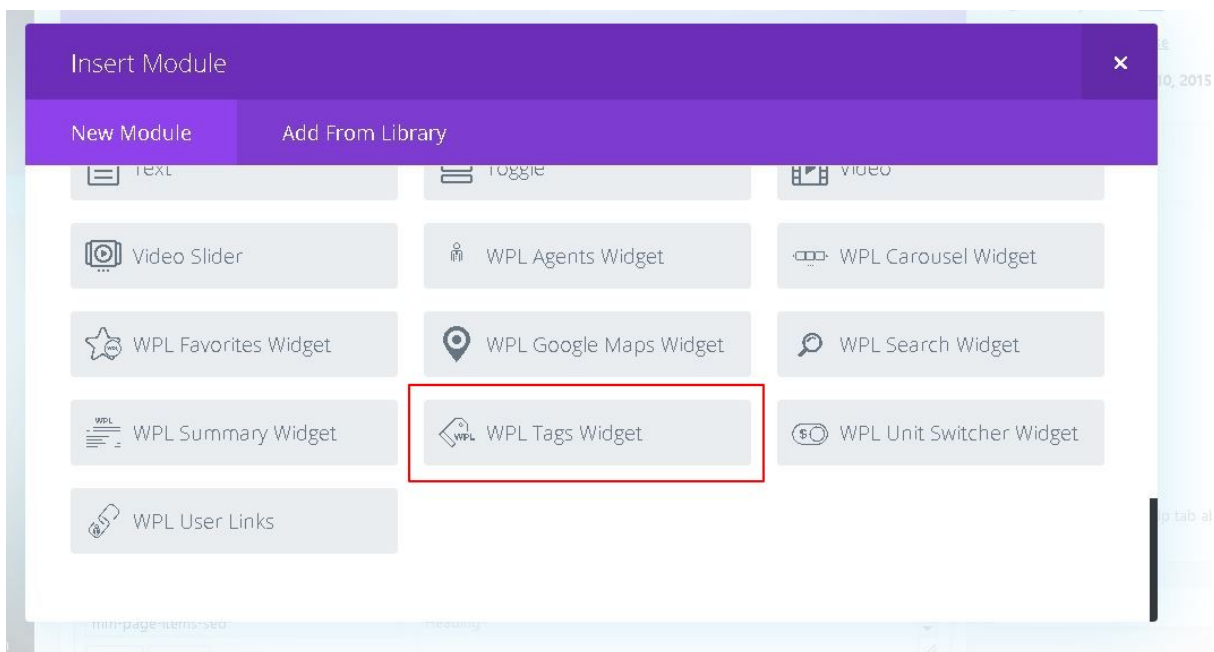

After adding the tags widget to a widget area you can see all listing tags with their count (If you set "Show Count" to Yes).

Tag Widgets on Divi Builder and Visual Composer:

Also the (WPL) Tags widget has been added to the Visual Composer and Divi page builder elements. So you can simply place it in your page contents using those page builders.

On Divi Builder:

On the visual composer:
